RESEARCH INTERESTS

I am broadly interested in the processes that form, and limit, where species are distributed, and what their roles are in communities and ecosystems. I use an integrative approach, (e.g. environmental niche modeling and analyses of functional and phylogenetic diversity), to examine how organisms shift their ranges and/or alter their behavior and morphology at range edges and during habitat change; I am particularly interested in the ability of species to survive rapidly changing climates and how climate change will influence extinction risk of a broad variety of taxa.
