RESEARCH INTERESTS

I am broadly interested in the processes that form, and limit, where species are distributed, and their roles are in communities and ecosystems. I use an integrative approach to examine community assembly, the effects of climate change on communities, and extinction. My goal is to help bridge the divide between ecological theory and on-the-ground conservation in order to make the best possible decisions not just for today, but also for the future.

TEACHING PHILOSOPHY

I am a vocal advocate for increasing inclusiveness in higher education, based on my own background as a first-generation, non-traditional student, who is also LGBT and a military veteran. I am a strong proponent of reflective teaching practices, direct mentoring, and engaging students in meaningful, hands-on activities and experiences to give students an opportunity not only to master the material, but to give them the tools they need to think critically in all aspects of their life.
